

ITX Series

Digital Signage Chassis

The ITX Series offers both extreme performance & high capacity. These chassis prove that it's possible to build an enclosure that can be used in both entertainment and industrial fields, making it perfect for use in Digital Signage.

Catered, Sophisticated Design

The ITX Series' Chassis' have small form factors to better cater to your space needs, whether you need a chassis to fit behind an LCD or a chassis that can blend in around it. The aluminum front panel is crafted to achieve a generous feeling of substance by minimizing gaps and holes; we even offer a wood panel and other unique bezel choices for layouts wherein your chassis will be visible. Everything is either covered or hidden to make sure the look is clean.

Self-cooling, Self-ventilation

When it comes to Digital Signage, your chassis needs to be able to cool itself. Oftentimes the chassis and contents are placed behind the LCD and therefore needs to be able to facilitate its own cooling in order to keep systems running. With a range of cooling and ventilation choices, you can create the perfect scenario for your devices to run without a hitch!

Graphics Are Welcome

Compatible with high-performance graphics cards, our chassis help you gain the best picture quality available so that you can proudly present information in appealing displays of color and motion.
